In Q1 to Q8, only one option is correct, Choose the correct option:

| 1. | In the linear regression equation $y = \theta_0 + \theta_1$. A) Slope of the line C) y intercept | X , θ_0 is the: B) Independent variable D) Coefficient of determination | |
|--|--|--|--|
| 2. | ue or False: Linear Regression is a supervised learning algorithm.) True B) False | | |
| 3. | In regression analysis, the variable that is be A) the independent variable C) usually denoted by x | eing predicted is: B) the dependent variable D) usually denoted by r | |
| 4. | Generally, which of the following method(s) dependent variables? A) Logistic Regression C) Both | B) Line | for predicting continuous ar Regression e of the above |
| 5. | | ient | B) usually less than zero D) equal to zero |
| 6. | If the slope of the regression equation is pos A) y decreases as x increases C) y decreases as x decreases | B) <mark>y ind</mark> | en: <mark>creases as x increases</mark> e of these |
| 7. | Linear Regression works best for: A) linear data C) both linear and non-linear data | , | -linear data e of the above |
| | The coefficient of determination can be in the A) 0 to 1 C) -1 to 0 | ne range B) -1 to D) 0 to | 1 |
| In Q9 to Q13, more than one options are correct, Choose all the correct options: | | | |
| | • | an be used for linear regression? B) RMSE D) MAE | |
| 10. | Which of the following is true for linear regression? A) Linear regression is a supervised learning algorithm. B) Linear regression supports multi-collinearity. C) Shape of linear regression's cost function is convex. D) Linear regression is used to predict discrete dependent variable. | | |
| 11. | Which of the following regularizations can b A) Ridge C) Pruning | e applie B) <mark>Lass</mark> D) <mark>Elas</mark> | <mark>80</mark> |
| 12. | Linear regression performs better for: A) Large amount of training samples with small number of features. B) Same number of features and training samples C) Large number of features D) The variables which are drawn independently, identically distributed | | |
| 13. | 3. Which of the following assumptions are true for linear regression? | | |
| | A) Linearit C) Non-Independent | <mark>y B) Hor</mark> D) Nor | • |
| | 2. 3. 4. 5. 6. 7. 11. 12. | A) Slope of the line C) yintercept True or False: Linear Regression is a super A) True In regression analysis, the variable that is b A) the independent variable C) usually denoted by x Generally, which of the following method(s) dependent variables? A) Logistic Regression C) Both The coefficient of determination is: A) the square root of the correlation coeffic C) the correlation coefficient squared If the slope of the regression equation is por A) y decreases as x increases C) y decreases as x decreases Linear Regression works best for: A) linear data C) both linear and non-linear data The coefficient of determination can be in the A) 0 to 1 C) -1 to 0 Which of the following evaluation metrics can be an experimental composition of the coefficient of the coefficient | C) y intercept D) Coe True or False: Linear Regression is a supervised let A) True B) Fals In regression analysis, the variable that is being pre A) the independent variable C) usually denoted by x D) usual Generally, which of the following method(s) is used dependent variables? A) Logistic Regression C) Both D) Non The coefficient of determination is: A) the square root of the correlation coefficient C) the correlation coefficient squared If the slope of the regression equation is positive, th A) y decreases as x increases C) y decreases as x decreases D) Non Linear Regression works best for: A) linear data B) non-C) both linear and non-linear data D) Non The coefficient of determination can be in the range A) 0 to 1 B) -1 to C) -1 to 0 D) 0 to Q9 to Q13, more than one options are correct, Choose 9. Which of the following evaluation metrics can be use A) Classification Report B) RMS C) ROC curve D) MAI O) Which of the following is true for linear regression? A) Linear regression is a supervised learning algon B) Linear regression is used to predict discrete dependent of the following regularizations can be applied A) Ridge C) Pruning D) Elas Linear regression performs better for: A) Large amount of training samples with small nur B) Same number of features and training samples C) Large number of features D) The variables which are drawn independently, in the complete of the following assumptions are true for linear tr |

MACHINE LEARNING

Q14 and Q15 are subjective answer type questions, Answer them briefly.

14. Explain Linear Regression?

A simple linear regression assesses the linear relationship between two continuous variables to predict the value of a dependent variable based on the value of independent variable.

linear regression equation $y = \theta_0 + \theta_1 X$

15. What is difference between simple linear and multiple linear regression?

Simple contain only one Independent variable while Multiple LR contain Multiples Independent variables.
